HOMEWORK OF 2D ANIMATION /40Marks

- 1.** In an animated dialogue scene, the character's lip sync matches the audio, but the body movements and facial expressions appear confusing to viewers.
Analyze how problems in clarity, readability, and synchronization of actions are affecting the audience's understanding of the scene.
- 2.** An action scene looks technically correct, but it feels slow and lacks emotional impact.
The character's reactions to impacts seem weak.
Analyze how intensity, exaggeration, timing, and spacing contribute to the lack of excitement in this animation.
- 3.** An animator uses limited animation and partial animation to refine a character in a short educational animation where only the mouth and hands move.
Evaluate how this choice affects character refinement, clarity of action, and readability for the audience.
- 4.** A fantasy scene includes strong magic, particle, and environmental effects, but the character's actions are difficult to follow.
Evaluate the effectiveness of these effects in supporting synchronization of actions and visual clarity in the scene.
