

HOME WORK: Video Effect

Instruction: all Answers must be on a clean white paper A4.

Consider the following scenario and Answer the Questions:

You are a cinematographer working on a film set for a dramatic scene taking place in a dimly lit, abandoned warehouse. The director wants to evoke a sense of mystery and tension in the scene. However, there are practical considerations to address, such as limited natural light and the need for clear visibility of the actors.

1. Discuss the role of color temperature in establishing the time of day or setting in a cinematic sequence.
2. How can you differentiate warm, cool and Neutral color?
3. How can you use color temperature strategically to guide the audience's emotional response to the scene?
4. What role does Contrast of Saturation play in creating visual interest and guiding the viewer's attention within the scene?
5. How does Cold-Warm Contrast, where cool and warm colors are Compared, influence the emotional tone and atmosphere of the scene?
