

PHP ASSESSMENT

1. Write a PHP function that checks whether a passed string is a palindrome or not?

A palindrome is a word, phrase, or sequence that reads the same backward as forward, e.g.,
madam, refer or radar.

2. Write a function to calculate the factorial of a number, the function accepts the number as an argument. /5

Example: If Input is 5, then Output will be 120

3. By using for loop, write a PHP program that displays total sum of prime numbers found in the range of 0 and 50 /5
